

CLEAR RUN DRAINAGE IMPROVEMENTS, PHASE 1

This is a major drainage project designed to reduce flooding and improve water quality.

Phase 1 includes:

- Large box culverts under College Acres Drive and Mallard Street
- A completely new drainage system, sidewalk and street re-build for College Acres Drive from Racine Drive to Oriole Drive
- A stream restoration and floodplain storage area along Clear Run Branch, including habitat restoration

Project Timeline

The project is anticipated to begin sometime in May 2022 and last up to one year. The project is in many locations so multiple construction sites will be going on at once to reduce the time of the work. We apologize for the temporary inconvenience to the impacted residents.

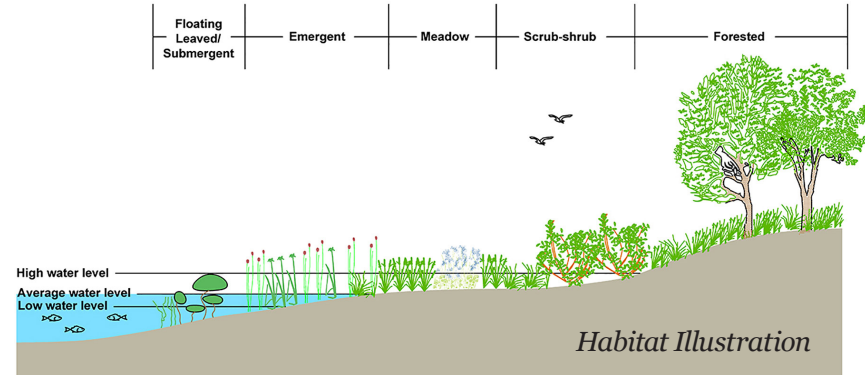

Multiple traffic and access impacts will occur.

- It will close College Acres Drive to thru traffic from Racine Drive to Oriole Drive. Local residents will be contacted by the general contractor and provided access to their property. However, vehicle access to driveways will be temporarily cut off at times. Designated parking zones within and outside of the construction area will be provided. A traffic detour will be established for thru traffic.
- Mallard Drive will be limited to one lane of traffic and at times, fully closed temporarily. A traffic detour will be established.

If you have questions, please contact the City Stormwater Services Office at **(910) 343-4777**.
